

# Single Screw Partial Reclaim System

A single screw partial reclaim system has all the major components found standard in all ABS blast rooms. This is a basic “automated” reclaim system that is best suited for low to medium blasting production levels. This System can be expanded into an H-shaped or U-shaped or full floor reclaim system as production demands increase.

Standard components include abrasive metering shed plates, heavy duty screw conveyors, belt and bucket elevator, air wash separator with rotary scalping drum, oversized abrasive storage hopper, caged access ladder, and maintenance access platform.
